## PROJECTS

### Online E-commerce Website (2025) ➡

- Project Description** :- Built a React-based E-commerce website where users can browse products, view product details, select quantity, manage their cart (add, update, remove items) and can placed order. Implemented authentication with secure signup/login routes using Firebase. Managed cart state efficiently using Redux , localStorage and styled the application with Tailwind CSS. Added a product search feature to improve user experience. Also have a seller dashboard where seller can see all placed order . To store all products and placed orders i used firestore database .
